

My Climate Path is an employer-led programme of activity which raises awareness of the roles and skills required for the jobs of the future that will drive sustainable economic growth in a circular and net zero economy.

The programme provides employers with a simple mechanism for engaging, through a range of projects, with young people in schools around green jobs, climate change and sustainability.

## Why get involved?

- ✓ Support young people to develop their skills and help prepare them for the workforce
- ✓ Connect with a wide range of motivated and engaged young people
- ✓ Have the opportunity to showcase sustainable practice through real life examples
- ✓ Make a positive difference to your local community

## How?

We're looking for **industry partners and passionate individuals** to help influence and inspire young people through the activities below on the career pathways to enter the green economy.

**Climate Heroes** are matched with a school for 12 months to work with both educators and young people to influence the curriculum and support young people to develop the skills required for sustainable economy.

Through delivering different activities and providing real-life examples employers support young people to learn about the different jobs and pathways to enter a sustainable and circular economy by committing to the delivery of at least one school engagement per term and the delivery of 5 day work placement.

**My Fashion Path** - Bringing to life and increasing young people's awareness of the sustainable fashion industry through a range of employer led activity.

My Fashion Path provides employers the opportunity to engage with educators and young people to bring to life the fashion industry and increase the awareness of the importance and need for sustainable and circular fashion.

Through delivering a range of different activities employers can support young people to explore key themes around sustainable fashion and gain a better understanding of the career pathways within the fashion and manufacturing industry.
